

CASSIUS & MODEL ONE PLANTERS

Installation Instructions

- 1** If not removing the drainage hole cover, we recommend adding 2-3" of gravel before potting your plant to prevent root rot. The gravel will serve as drainage. Do not over-water your plant.
- 2** If removing the drainage hole cover, we recommend using a tool with a sharp edge to cut through the silicone, such as an Xacto knife or single blade. Cut through both sides of the cover (top and bottom).
 - Make sure the blade goes all the way through on both sides. If necessary, tap gently to remove with a blunt object.
 - Wipe away any excess with a damp, soft cloth (microfiber preferred).
