

LINEAR STEEL BASE VANITIES INSTALLATION AND SPECIFICATIONS

CAUTION

PROFESSIONAL INSTALLATION RECOMMENDED

Please inspect your new vanity prior to installation. Once the vanity has been installed or altered, such as cutting the cabinet's back panel or adhering the top, it cannot be returned. If you notice any damage or defects, please contact us at **800.486.6554** or shop@roomandboard.com for assistance.

Moving and Storage

- Keep in original packaging until installation to protect from damage.
- Do not stack anything on top of the packaging.
- Use a two-person team to lift and move.

Installation Requirements

- Professional installation with a two-person team.
- Water supply and plumbing installed according to local code.
- Level floor and plumb walls at installation site.

Vanity Installation Recommendations

- Cut or drill holes in the back or bottom panel of the vanity cabinet to accommodate plumbing.
- Attach the vanity cabinet securely to the wall using appropriate hardware for your wall material.
- If needed, use the supplied leveler feet to accommodate a floor that is not level. To use, remove plastic foot caps, insert the levelers and set at the desired height.

Top Installation Recommendations

- Apply a nickel-sized amount of clear 100% silicone to all four corners of the top edge of the vanity cabinet.
- Using a two-person team, lift and place the vanity top. Lower it slowly; do not drop it onto the vanity cabinet.
- Wipe off excess silicone immediately.

Backsplash and Side Splash Installation Recommendations

- Apply a nickel-sized amount of clear 100% silicone every eight to ten inches on the wall where the backsplash will be installed.
- Install the backsplash by gently pushing it onto the wall and centering it on the top.
- If you selected a left overhang or right overhang top, a side splash is included. Install the side splash after the backsplash.
- Once cured, run a small bead of 100% clear silicone along the joint where the backsplash and optional side splash meet the vanity top.
