

WOOD STREETER FLOOR LAMP

CAUTION

It is strongly recommended that installation of this product is done by two people. Take care not to put unnecessary force on the stem; handle lamp by base only.

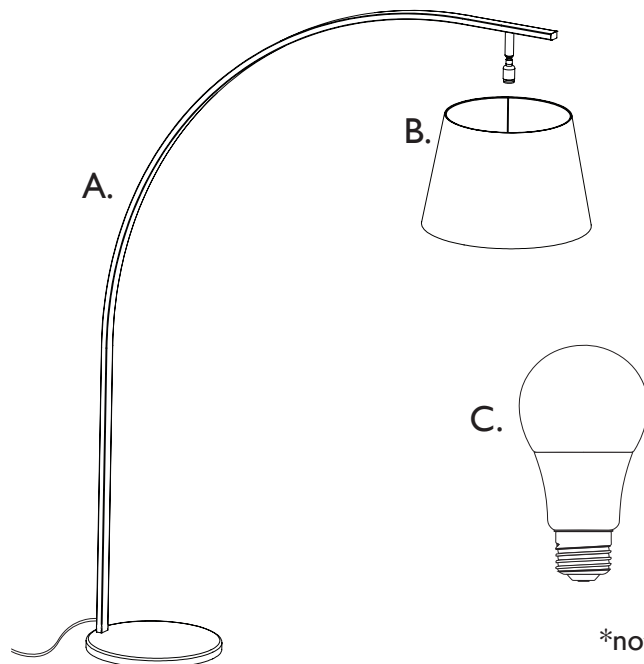

READ these instructions entirely prior to installation.

Assembly of this lamp requires some minor lifting. Improper handling of heavy components could result in damage to the product.

Important Safety Note:

There is a vent on the bottom of the lamp's base that releases heat from the internal electrical components. Placing the base on high pile carpet could obstruct this vent, resulting in overheating. We recommend placing the lamp on a flat floor surface such as wood, tile or low pile carpet to avoid this risk. Do not remove the leveling feet, as this would also obstruct the vent.

THIS PRODUCT INCLUDES:

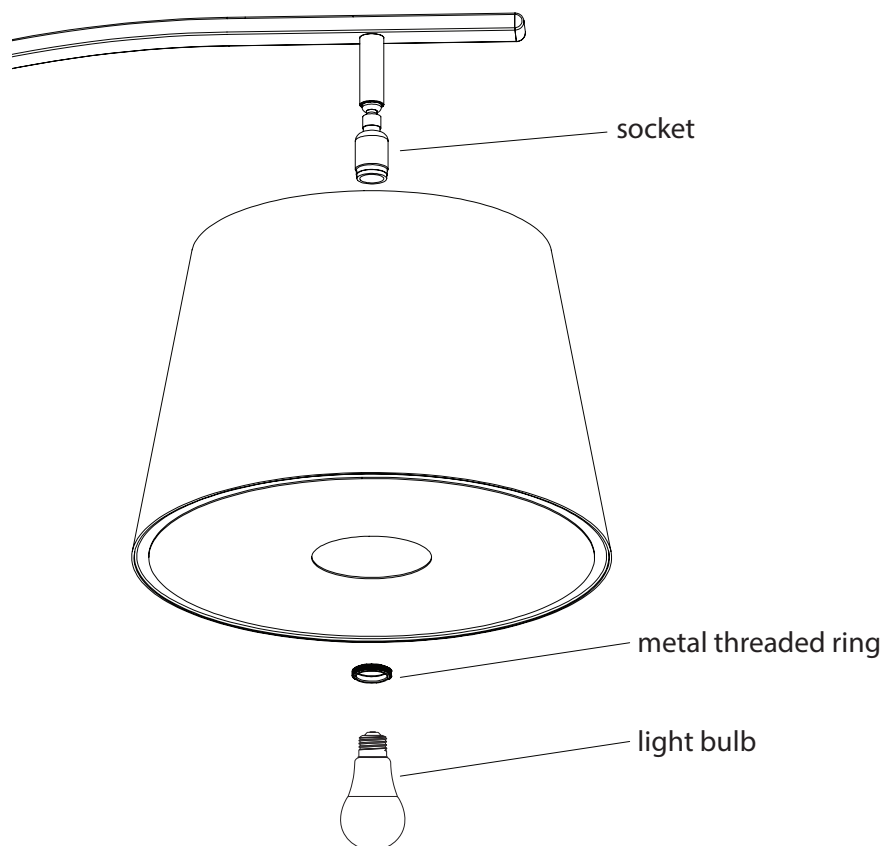

- A. Lamp base
- B. Lamp shade
- C. Dimmable LED bulb

*not to scale

Shade attachment

Position the lamp in its desired location. First, unscrew the threaded metal ring attached to the socket. Then, slide the shade frame up on to the socket while a second person screws the threaded ring back into place. Finally, insert the light bulb into the socket and twist it into place.

SPECIAL CONSIDERATIONS:

The touch sensor switch on the back side of the lamp stem cycles between three brightness settings and requires a dimmable LED bulb.

To avoid damage to this product, whenever possible, utilize the help of a second person when moving, adjusting or assembling.

Wood is a natural product and is susceptible to environmental and atmospheric changes. Over time, the curvature of the stem may fluctuate up or down slightly.

The lamp base includes adjustable leveling feet. Ensure your lamp base is properly level after installation.

Not all light bulbs function the same. Replacement bulbs can be purchased from roomandboard.com
